OUR TAKE

The KATUN Arivia C2130 will be a great addition to any mid-sized workgroup or department. With intuitive ease of use, easily replaceable components, simple misfeed clearance, and an above average maximum paper capacity, workflow productivity will be maximized. The intuitive 7-inch color touch screen control panel ensures enhanced clarity for simple and complex tasks alike. Job tasks are accomplished effortlessly, both at the device and at the desktop, aided by well-designed menus. The touchscreen is customizable, allowing users to quickly access features as well the ability to create and save presets to boost efficiency. Flexible mobile print support means workers can continue to be productive, whatever their preferred way of working. Exceptional image quality results ensure professional looking output. Bold text, consistent fine lines and solids, clear separation between halftones, and bright color business graphics and photographic images were achieved during KPI's tests. For IT administration, the web user interface is logically organized with a good level of functionality. Secure print offers users the ability to release documents at the device with a PIN code. As well as document-level protection, an array of robust security features allow administrators to protect sensitive documents and defend the device from unauthorized access. This device has a strong value proposition based on it's performance and ease of use. Keypoint Intelligence would recommend the KATUN Arivia C2130.

Any value commentary is based on RRP in USD at the time of the report's publication. For further information, please use our [TCO calculator tool](#) in bliQ.

Advantages	Limitations
Competitive short and long-run print jobs overall; above average duplex performance for short-run print jobs	Slower than average scan speeds across all test areas
The device generated fast first-print times for all tested file formats	Below average first copy out times from the document feeder
Competitive first copy out times from the platen	Best compression color scan file size was larger than average
Scanned black file sizes were smaller than average	Job stream results were slower than average, meaning productivity could be impacted in multi-user environments
Competitive paper weight handling through the main tray (300gsm)	Rated yield for black and color toners was below average
